

LEARNING PROGRAMS

Learning Programs for Business Agility

ICAgile's Learning Programs provide the transformational learning needed to ignite **business agility**. The three Learning Programs are Leading Change, Value Delivery, and Organizational Enablement.

Business agility journeys are catalyzed by cultural and behavioral shifts that start with leadership and are enabled by strategic and structural changes in an organization.

ICAgile's Learning Programs enable these shifts, which are key to creating the environment for exceptional products, mission-aligned outcomes, and delighted customers.

Bring accredited learning to your organization

Leading Change

Realize sustainable agility through cultural change, not process change.

Successful business agility journeys begin with leadership and coaching that catalyzes mindset shifts and unleashes human potential. This Learning Program focuses on the cultural and behavioral changes needed at all levels of the organization to thrive in uncertainty. It also emphasizes the systemic paradigm shifts and ongoing self-development leaders and coaches need to lead organizations through complexity and continuous change.

Value Delivery

Delight your target audience with effective high-quality products and customer-centric outcomes.

Agility is a “must-have” for organizations that seek to deliver value consistently in dynamic environments. This Learning Program encompasses the strategy, technical excellence, product ownership, and delivery management needed to bring highly relevant products to market in today’s fast-moving world.

Organizational Enablement

Build adaptive capability across the organization through dynamic structures and systems.

Essential organizational functions, such as finance and HR, are often seen as impediments to agility. However, with the right shifts in mindset and structure, these functions have the power to enable and amplify agility. This Learning Program covers new ways of working in enabling functions to help accelerate the journey to business agility.
